

Installation Instructions for 81680 Toe Plates

Check & Adjust toe with vehicle on level ground and with the wheels pointed strait ahead.

Note: Check to make sure there are not any bulges in the tires or bent wheels since this will affect the toe measurements.

- 1) Lean one toe plate up against each wheel w/ the folded edge facing outward away from the vehicle. Make sure the entire plate is up against each wheel & tire.
- 2) Place tape measures in slots and measure distance in front and rear. Subtract measurements to calculate toe-in or toe-out (i.e. distance is smaller in front of the wheels for toe-in).
