

**NOTES:**

1. THIS DRAWING DESCRIBES THE FUELAB 525xx SERIES IN-LINE FUEL PRESSURE REGULATOR.
2. FEATURES INCLUDE:
  - ONE -6AN INLET PORT (LEFT SIDE OF REGULATOR)
  - ONE -6AN RETURN PORT (RIGHT SIDE OF REGULATOR)
  - AVAILABLE IN PRESSURE RANGES: "L", "C", "T", "E" AND "G"
  - BILLET ALUMINUM, STAINLESS STEEL CONSTRUCTION WITH FLUOROSILICONE DIAPHRAGM AND SEALS. PLUG AND FITTING ARE MADE OF UNPLATED BRASS.
3. FUEL COMPATIBILITY INCLUDES:
  - GASOLINE (PUMP OR RACE)
  - METHANOL
  - ETHANOL (INCLUDING E85)
  - DIESEL
4. UNIQUE SERIAL NUMBER DOES NOT CONTAIN DIRECT INFORMATION IN DETERMINING MODEL NUMBER. CONTACT FUELAB FOR DETERMINATION OF MODEL NUMBER BASED ON SERIAL NUMBER.
5. BRACKET, PRESSURE ADJUSTMENT HARDWARE, BRACKET MOUNTING HARDWARE, GAUGE PORT PLUG, BARBED FITTING, 3X PORT O-RINGS AND INSTRUCTIONS INCLUDED, BAGGED SEPARATELY FROM REGULATOR.
6. SEE TABLES BELOW FOR DETERMINATION OF DESIRED MODEL NUMBER.
7. RATED FLOW CAPACITY IS A FUNCTION OF PRESSURE SETTING AS WELL AS RETURN LINE SIZE AND CONFIGURATION, THEREFORE FLOW CAPACITY MAY BE HIGHER OR LOWER, BUT REPRESENTS TYPICAL CAPACITY. REGULATION SLOPE REFERS TO CHANGES IN FUEL PRESSURE AS A FUNCTION OF CHANGES IN FLOW RATE. AS THE AMOUNT OF FUEL RUNNING THROUGH THE REGULATOR REDUCES, THE REGULATED PRESSURE WILL LOWER, SPECIFIED BY THE REGULATION SLOPE.
8. FOR TYPICAL EFI APPLICATIONS, PRESSURE REFERENCE PORT IS PLUMBED TO THE ENGINE'S INTAKE MANIFOLD. CHANGES IN AIR PRESSURE AT THIS PORT WILL RESULT IN A CHANGE IN FUEL PRESSURE AT A RATIO OF 1:1.

**MODEL NUMBER SCHEME:**

**PRESSURE RANGE CODE WITH SEAT SIZE, p - s**

P	APPROX. PRESSURE RANGE	S	SEAT SIZE	APPROX. FLOW CAPACITY	REGULATION SLOPE
L	1-3 PSID (0.1 - 0.22 BAR)	L	LARGE	1.25 GPM (285 LPH)	0.7 PSI/GPM
C	4-12 PSID (0.28 - 0.82 BAR)	L	LARGE	2.5 GPM (570 LPH)	0.8 PSI/GPM
T	10-25 PSID (0.7 - 1.7 BAR)	S	STANDARD	2.5 GPM (570 LPH)	0.9 PSI/GPM
T	10-25 PSID (0.7 - 1.7 BAR)	L	LARGE	3.2 GPM (725 LPH)	0.9 PSI/GPM
E	25-90 PSID (1.7 - 6.2 BAR)	S	STANDARD	2.5 GPM (570 LPH)	3.0 PSI/GPM
E	25-90 PSID (1.7 - 6.2 BAR)	L	LARGE	3.7 GPM (1000 LPH)	3.0 PSI/GPM
G	90-125 PSID (6.0 - 8.6 BAR)	S	STANDARD	3.7 GPM (1000 LPH)	5.75 PSI/GPM

**COLOR CODE, c**

C	COVER COLOR	BODY COLOR
1	BLACK	BLACK
2	RED	CLEAR
3	BLUE	CLEAR
4	PURPLE	CLEAR
5	GOLD	BLACK
6	GREEN	CLEAR

## Operating and Installation Instructions

### **CAUTION!**

This product is to be installed only by persons knowledgeable in the repair and modification of vehicle fuel systems and general vehicle systems modification. Only a qualified technician or mechanic who is aware of applicable safety procedures should perform the installation of this product.

### **GASOLINE AND OTHER FUELS ARE FLAMMABLE AND CAN BE EXPLOSIVE!**

Perform the installation in a well ventilated location only to minimize the build up of fuel vapors. **NO** open flames, smoking or other sources of ignition are to be present during installation, to prevent fire or explosion that can cause serious injury or death. Grinding, cutting, and drilling must be performed with care to prevent ignition. Draining and removal of all fuel and ventilation of vapors in vehicle and fuel system is recommended when performing such procedures. Proper eye and personal protection is required at all times during installation.

### **WARNING!**

The Vehicle's fuel system may be under pressure! Do not loosen any fuel connections until relieving all fuel system pressure. Consult an applicable service manual for instructions to relieve fuel system pressure safely. This product is intended for racing, off-road, or marine use only. This fuel system component is capable of altering engine tuning and therefore not legal for sale or use on emission controlled motor vehicles.

#### Product Contents:

Check the diagram and list of components (right) to ensure that no components are missing from box. Contact your Fuelab distributor immediately for replacement.

#### 51502 Features and Performance Ratings:

Inlet Port Sizes	-6AN Military Port
Seat Size	Standard
Regulation Slope	3 PSI/GPM
Maximum Flow Capacity	2.5 GPM at 25 PSID (570 LPH at 1.75 Bar)
Pressure Adjustment Range	Pressure Range "E" 25-90 PSID (1.75-6.2 Bar)

**WARNING!** Exceeding maximum flow capacity may result in an over-pressure operating condition.

#### Before Installation, Plan Entire Fuel System:

These instructions are limited to general topics of regulator component installation and may not include specific information pertaining to your application. These instructions are written assuming the use of an electric fuel pump capable of at least 100 PSIG outlet pressure and limited to the specified *Maximum Flow Capacity* (above). This regulator has an internal spring that can be changed for other pressure ranges, including "T" range, for 10-25 PSID if required by the specific application. Lower, carbureted pressure ranges are recommended for a different model of regulator only. Visit our company website for specific details pertaining to example fuel systems and other solution ideas. Additional information including advanced troubleshooting, any special alerts and FAQ's pertaining to this and other products is also available.

#### General Regulator Performance Notes:

The notation "PSIG" means pressure in Pounds per Square Inch (PSI) relative to the prevailing atmospheric condition or outside air. This is referred to as Gauge Pressure. The notation "PSID" means pressure in PSI relative to another pressure source or called the Differential Pressure. The intake manifold pressure, when plumbed to the regulator, changes the fuel pressure in a 1:1 ratio. When the engine idles (for example 12 Inches of Mercury or 6 PSIG of vacuum) fuel rail pressure will lower 6 PSI, when compared to the setting with the engine off. For boosted applications, including turbo or superchargers, fuel rail pressure increases at a 1:1 ratio. An engine at 10 PSIG of boost as measured in the intake manifold, will increase the fuel pressure by 10 PSIG. The actual readings of pressure in a real world application would show a lower pressure, as the engine is using fuel that would normally be returning back through the return line when the engine is off. The amount of pressure difference to expect is a function of how much flow the engine is using (reference *Regulation Slope*, above).

### Plumbing Planning Notes:

Minimize plumbing restrictions between fuel rail(s) and regulator for peak performance, use -6AN (3/8") to -10AN (5/8") line as required per flow rate requirements of the vehicle's engine and fuel pump. EFI applications can use a "Y" block or "T" fitting to split the output of the fuel pump into one end of each fuel rail (for dual fuel rail application) then plumbed into single inlet port. Use of a -6AN (3/8") return line is typically recommended for this model of regulator. See diagram on next page as well as diagram below, to identify the ports used on the regulator. The fuel line used must handle high pressure. The use of fuel line such as stainless steel braided line and "AN" style fitting connections is recommended. The fuel ports (one -6AN Inlet Port and one -6AN Return Port) use "AN" or "military" style fittings. This plumbing standard is commonly used with racing and high performance applications. See step 6 on next page for additional information on this port standard. A fuel filter with a 60 micron or lower particle rating is required to be used upstream of regulator and downstream from fuel pump to protect it and the fuel injectors from foreign object damage. Reference the Schematic Diagram below for filter locations. Use of a liquid filled gauge exposed to engine compartment heat is not recommended as the liquid inside the gauge may exert measurement errors. **DO NOT** plumb gauge port to any gauge mounted inside the vehicle or in passenger compartment. A line burst can spill fuel inside passenger compartment and on occupants, possibly causing serious injury or death. An electric gauge or pressure transducer system is recommended for readings in a passenger compartment.

### Typical EFI Fuel System Schematic Diagram:

### Installation Steps:

1. Disconnect the ground terminal from battery and allow the vehicle's engine and exhaust system to cool. Relieve fuel system per applicable service manual. Follow all Warnings and Cautions written on previous page of these instructions.
2. Modify, remove or replace other fuel system components as required per established build plan (reference notes on previous page and above).
3. Use the supplied bracket as a drilling template to mark holes for mounting bracket. Choose a location that minimizes exposure to excessive heat, near fuel rails. Mounting bracket can be modified as required. Use clear or colored enamel paint to protect bracket surface after any modification.

4. Apply light oil onto the threads of the *Adjustment Screw*. Small amounts of air leakage in the adjustment hardware may be present during operation. This is a normal operating condition. Thread the *Adjustment Screw* by hand until a slight tension is felt, this position is the minimum pressure setting. Do not tighten screw any further. Pressure is to be adjusted later in these instructions. Install the *Flat Washer*, then the *Jam Nut*. Tighten the *Jam Nut* hand tight for later adjustment.
5. Install *Bracket* to regulator using supplied *Bracket Screws* and *Bracket Lock Washers*. Tighten *Bracket Screws* between 25-40 in-oz of torque (snug, do not over tighten screws).
6. Install the fuel fittings (not supplied). The threads used on these *Fuel Ports* are not tapered or pipe threads. Do not use Teflon<sup>®</sup> thread tape or thread sealant on these threads, as this can cause leakage or introduce debris into the fuel system. Fittings to be used with these style of ports require use of the enclosed-906 *O-rings* for proper sealing (reference diagrams, below). Use light oil to lubricate the *O-rings* just prior to installation. Install the *O-rings* onto the fuel fitting first. Position the *O-ring* in the thread relief of the fitting as shown in the diagram, below. Thread fitting into regulator and tighten between 5 and 15 ft-lbs of torque.
7. Use Teflon<sup>®</sup> tape or thread sealant on all 1/8"-NPT fittings to be used for the *Gauge Port* and *Pressure Reference Port* (see diagrams, below). Install fittings or plug as required. If pressure reference port is not plumbed to the intake manifold (for typical EFI applications, port is plumbed to the intake manifold) then install the *Barbed Fitting* (supplied) and allow fitting to vent to atmosphere (do not plumb or plug port).
8. Install regulator assembly into vehicle, fastening the bracket to the vehicle. Attach fuel lines, *Gauge Port* line (if external pressure gauge is used in application) and *Pressure Reference Port* line (if applicable). Boosted applications (such as turbo or supercharger) will require a hose clamp on barbed fitting to prevent hose from coming loose. Use of -3AN or -4AN fitting and line can also be used as a substitute to the barbed fitting.

9. Inspect fuel system for any contact of fuel lines or wires with other components that can cause chafing or rubbing. Secure all components and fuel lines.
10. Connect the vehicle's battery. Turn on fuel pump (typically by bypassing fuel pump relay) without engine operating. ECU or engine management computer may be controlling the relay. The ECU may only operate pump for a few seconds each time ignition switch is set to on. The pump will have to operate several seconds (30+) to prime and drive air out of the fuel system. Fuel system pressure should read about 25 PSIG (use an external gauge for adjustment if a permanent gauge is not used). Inspect vehicle for any leaks. Turn off fuel system and repair any leaks that may be present before continuing.
11. When adjusting pressure, be sure that fuel pump is operating to monitor pressure. Increase pressure by rotating adjustment clockwise. Do not thread *Adjustment Screw* past jam nut within 1/8". Over tightening the adjustment screw can damage the regulator. It is recommended to use a "baseline" pressure reference when adjusting the pressure (adjusting the pressure with engine off or *Pressure Reference Line* unhooked). The vehicle's engine may not produce consistent vacuum during idle to have repeatable readings.
12. After final adjustment of fuel pressure, tighten *Jam Nut*. Road test vehicle, and retest pressure upon return to ensure accurate adjustment.

## LIMITED WARRANTY

FUELAB, a division of FCP, Inc., having its principal place of business at 826A Morton Court, Litchfield, IL 62056, USA ("Manufacturer") warrants its FUELAB products (the "Products") as follows:

### 1. Limited Warranty.

Manufacturer warrants that the Products sold hereunder will be free from defects in material and workmanship for a period of 2 Years from the date of purchase to the original purchaser. If the Products do not conform to this Limited Warranty during the warranty period (as herein above specified), Buyer shall notify Manufacturer in writing, or by phone, of the claimed defects and demonstrate to Manufacturer satisfaction that said defects are covered by this Limited Warranty. If the defects are properly reported to Manufacturer within the warranty period, and the defects are of such type and nature as to be covered by this warranty, Manufacturer shall, at its own expense, furnish replacement Products or, at Manufacturer's option, replacement parts for the defective Products. Removal of Products from vehicle (*Vehicle means any automotive, bike or marine transportation powered by an internal combustion engine. This product is NOT intended or designed for use on aircraft, experimental or otherwise.*), shipping to Manufacturer and installation of the replacement Products or replacement parts shall be at Buyer's expense.

### 2. Other Limits.

THE FOREGOING IS IN LIEU OF ALL OTHER WARRANTIES, EXPRESS OR IMPLIED, INCLUDING BUT NOT LIMITED TO THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. Manufacturer does not warrant against damages or defects arising out of improper or abnormal use or handling of the Products; against defects or damages arising from improper installation (where installation is by persons other than Manufacturer), against defects in products or components not manufactured by Manufacturer, or against damages resulting from such non-Manufacturer made products or components. Manufacturer passes on to Buyer the warranty it received (if any) from the maker thereof of such non-Manufacturer made products or components. This warranty also does not apply to Products upon which repairs have been effected or attempted by persons other than pursuant to written authorization by Manufacturer.

### 3. Exclusive Obligation.

THIS WARRANTY IS EXCLUSIVE. The sole and exclusive obligation of Manufacturer shall be to repair or replace the defective Products in the manner and for the period provided above. Manufacturer shall not have any other obligation with respect to the Products or any part thereof, whether based on contract, tort, strict liability or otherwise. Under no circumstances, whether based on this Limited Warranty or otherwise, shall Manufacturer be liable for incidental, special, or consequential damages.

### 4. Other Statements.

Manufacturer's employees, representatives' and/or resellers ORAL OR OTHER WRITTEN STATEMENTS DO NOT CONSTITUTE WARRANTIES, shall not be relied upon by Buyer, and are not a part of the contract for sale or this limited warranty.

### 5. Entire Obligation.

This Limited Warranty states the entire obligation of Manufacturer with respect to the Products. If any part of this Limited Warranty is determined to be void or illegal, the remainder shall remain in full force and effect.

### 6. Warranty Service

**What Does This Warranty Not Cover?** Any problem that is caused by abuse, misuse, or an act of God (such as a flood) is not covered. Also, consequential and incidental damages are not recoverable under this warranty. Some states do not allow the exclusion or limitation of incidental or consequential damages, so the above limitation or exclusion may not apply to you.

**How Do You Get Service?** In order to be eligible for service under this warranty you **MUST** return the Warranty Registration card, or register on-line at [www.fuelab.com/warranty](http://www.fuelab.com/warranty) within 30 days of purchasing the Product.

If something goes wrong with your product contact FUELAB at 1-800-541-2345, International customers call 001-217-324-3737, for a Return Authorization Number (RMA). After receiving your RMA send it postage paid, fully insured, with a brief written description of the problem to:

FUELAB Warranty Department, 826A Morton Court, Litchfield, IL 62056

We will inspect your Product and contact you within 72 hours of receipt to give the results of our inspection and an estimate of the labor and/or parts charges required to fix the Product, if applicable. If covered under this limited warranty Manufacturer will repair Product and return it to you at no cost. If the Product is NOT covered under this warranty and if you authorize repairs, we will return the repaired Product to you COD, or prepaid via credit card, within 72 hours. There is no charge for inspection. If return product is found to be free of defects a \$25.00 shipping and handling charge will be applied. We will return the repaired Product to you COD, or prepaid via credit card, within 72 hours.
