

INSTALLATION INSTRUCTIONS

2013-2014 DODGE 2500/3500 6.7L BS | PART NO. 17049

MAGNAFLOW RECOMMENDS PROFESSIONAL INSTALLATION ON ALL THEIR PRODUCTS

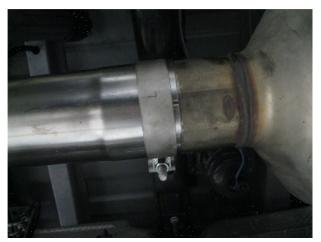

WARNING: When working on, under, or around any vehicle exercise caution. Please allow the vehicle's exhaust system to cool before removal, as exhaust system temperatures may cause severe burns. If working without a lift always consult vehicle manual for correct lifting specifications. Always wear safety glasses and ensure a safe work area. Serious injury or death could occur if safety measures are not followed.

ATTENTION: Always install any supplied band or U-bolt clamps to the proper torque specifications of 40-45 ft-lbs for band clamps and 30-35 ft-lbs for U-bolt clamps. Over tightening will result in the clamp breaking and will NOT be warranted by MagnaFlow.

MAGNAFLOW: 22961 Arroyo Vista - Rancho Santa Margarita, CA 92688 | 1(800) 990-0905 Technical Support: 1(800) 959-9226 | Email: moreinfo@magnaflow.com

XINSTALLATION INSTRUCTIONS

Step 1. Begin removal of the OEM system by unclamping the OEM Extension Pipe and muffler from the junction behind the DPF. You can then disengage the welded hangers from the rubber insulators, working rearward finish removing the system. Do not damage or discard the rubber insulators or sensor bracket and fastener, as they will be reused to mount the new system.

Step 2. Begin installation of the Magnaflow system by clamping the Inlet Pipe to the outlet of the DPF using a supplied 4.00" clamp and fitting the hangers in the rubber insulators (leave all clamps loose for final adjustment of the complete system).

Step 3. The longer Inlet Pipe Extension will be needed for Long Bed applications only.

Step 4. When using the long bed extension pipe attach the OEM cable bracket using the OEM bolt.

Step 5. The shorter Inlet Pipe Extension will be needed for all Mega Cab applications.

XINSTALLATION INSTRUCTIONS

Step 6. Next Install the Tail Pipe Assembly in a similar fashion using the supplied 5.00" clamps and by fitting the welded hangers into the rubber insulators.

Step 7. Once a final position has been chosen for the new exhaust system, evenly tighten all clamps from front to rear using the torque specifications on page one of the instructions. Inspect all fasteners after 25-50 miles of operation and re-tighten if necessary.
