

F-Body Tunnel Mount Bottle Bracket Mount

F-Body Transmission Tunnel Bottle Bracket Instructions

Part #: 00-33000

INSTALLATION INSTRUCTIONS

Installation Instructions

Remember to always use check for the fuel cell or any fuel lines before drilling.

- This bracket will come with all the hardware you need to create a safe and level environment to store your nitrous bottle, and keep it locked in place. Slight modification is required.
- Remove the lower portion of the back seats and pull the carpet back on the rear transmission tunnel(Optional).
- Place the mounting bracket over the transmission tunnel and mark where your mounting holes will be. Drill your holes with a 3/8" drill bit. Place the bracket over the transmission tunnel and insert the bolts through the drilled holes with a washer. You will have to get under the car to put the nuts and washers on the secure the bracket.
- Once your bracket is secure you can install the bottle brackets and bottle with the tall side towards the front of the car. Make sure the bottle nipple is facing down.
- Attach you nitrous main feed line and test for leaks. When you're sure there are no leaks you are ready to go!
