

GTO Trunk Bottle Bracket Mount

GTO Tire Bottle Bracket Instructions

Part #: 00-33010

INSTALLATION INSTRUCTIONS

Installation Instructions

Remember to always use check for the fuel cell or any fuel lines before drilling.

- This bracket will come with all the hardware you need to create a safe and level environment to store your nitrous bottle, and keep it locked in place. Slight modification is required.
- Pull the carpet back on the rear wall of your trunk (towards the cab) to reveal the fuel cell support.
- Place the mounting bracket plate on the support bracket and attach it using the supplied 1/4x20 bolts. We have included extra mounting bolts if you would like to drill and tap the support beam for extra support.
- place the four bolts in the four center holes leaving them raised about 3/4" and re attach the carpet. Using a razor blade cut an 'X' over the top of the bolts. Remove carpet and bolts and re attach carpet, this will give you access to the bolt holes without having to remove the carpet in the future.
- Attach the bottle brackets to the mounting plate using the supplied bolts, the nuts can be used but are not required.
- Mount the bottle according to the photo to the right. Be sure the bottle nipple is facing down. Your Bottle should be facing the passenger side)
- Attach you nitrous main feed line and test for leaks. When you're sure there are no leaks you are ready to go!
